

Fabrication Guide: Edge Wrapping Recycled Leather Veneer Panels

Edge wrapping Recycled Leather Veneer panels results in beautiful, streamlined corners. The following guide illustrates the fabrication steps required to achieve this sophisticated finishing technique.

1 - Lay up the panel in the center of the sheet & apply adhesive to both surfaces

2 - Laminate the front surface and cut-out the outside corners as shown

3 - Fold the leather on the panel, applying pressure with a hand roller on all surfaces. Cut out excess material.

4- Apply a fill stick crayon of a matching color to fill the edge on the corner for a cleaner look.

5 – The end result gives you a clean-edged panel on all five sides.
